

GREGG DRILLING LLC

PORTABLE DIRECT PUSH SERVICES

Overview

Gregg accomplishes direct-push and CPT work inside buildings and small spaces by utilizing our ramset CPT unit. Common projects that deploy the ramset include: geotechnical evaluations of existing buildings or environmental characterization of contaminant sources such as dry-cleaner sites.

When anchored to the concrete floor slab, the ramset unit can push with up to 20-tons of force, rivalling most CPT truck-mounted units.

Features

- Very limited access rig for indoor work, slab-on-grade or basements
- Ramset rig bolts to concrete slab to develop reaction force
- 6" concrete thickness is recommended
- Man-portable equipment
- Real-time CPT data presentation
- Fully compatible with Gregg's high resolution site characterization tools including MiHPT, EC, UVOST

Specifications

Length/Width: 2 ft x 2ft

Height (Mast down): 4 ft

Push capacity: 20 tons

Height (Mast up): 6 ft

SERVICES:

- Piezocone Testing (CPTu)
- Soil and groundwater sampling
- High resolution site characterization (MiHPT/EC/UVOST)
- Piezometer installation
