

GREGG DRILLING LLC

REMEDIATION SERVICES & CAPABILITIES

Overview

Gregg Drilling's mobile remediation injection platforms are self-contained and have integrated operator workstations. Gregg provides integrated mixing and pumping systems that can achieve injection rates up to 100 gpm and can regulate injection pressure between 0-1500 PSI. With the use of Gregg's multi-point manifolds, reagents can be delivered individually or simultaneously in up to 20 direct push points and/or injection wells. Gregg also utilizes in-line mixing systems to increase precision and mitigate human error.

Standard features on all equipment

- 10-point dual injection manifold
- Two 180 gallons stainless mix tanks with mixers
- Dual progressive cavity pumps -225 psi, 40 GPM flow rate
- On board deck space to hold a tote of chemical to reduce site footprint
- On board transfer pumps
- One board self-containment - 200 gallons
- Safety shower and eye wash station

Equipment included with all projects

- In-line dosing equipment and hose
- Injection and well manifolds with pressure relief
- Hydrant manifold for multiple and unique water hookups
- 12 x 50 containment berm
- Generators for on-site power
